The oversimplified Science

The earth is getting hotter

Human activity is the cause

The impact on Climate will be bad

2° C is the agreed on but arbitrary limit

- This limit is what was once felt was politically acceptable and is not based on scientific evidence

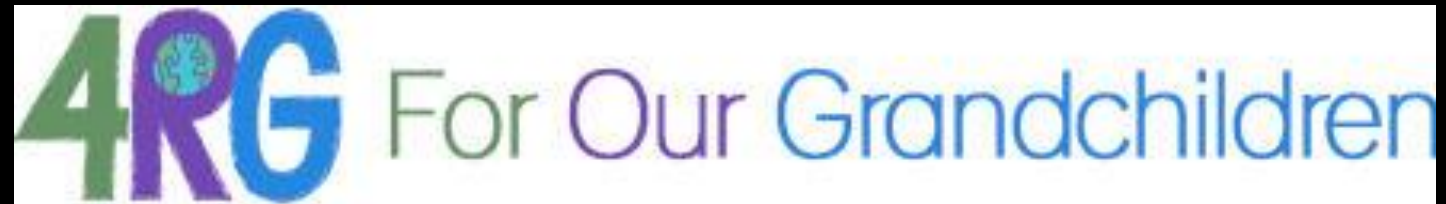

It's not the rate of emissions, it's the total

- 450 PPM is the concentration that will keep us below 2° C

Peterborough, Ontario

July 15, 2004

Mission

To inform, motivate, and mobilize the Canadian public to take action to combat climate change through political means

Who we are

National Organization

Local Chapters

Honorary Members

Stephen Lewis

David Suzuki

Desmond Tutu

**What Can
YOU Do?**

Get Involved

- **Take personal responsibility**
- **Participate on campus**
- **Influence others**
- **Attend the Climate Change Rally in September**

Price on Carbon

Carbon Tax

- A fee is charged at the point of origin or import on greenhouse gas emitting energy (coal, gas, oil)
- The fee increases gradually and predictability over time
- The fee is returned to the public

**If a 14-year-old
boy can build
a working
windmill to
power his
village in
Malawi, we
can solve the
climate crisis**

Samuel
